

**Title: HanApp: A Missing Persons Reporting and Alerting Application Suite in the Philippines**

Accomplished: 06/18/2023

<b>Panel/Reader's Comments</b>	<b>Actions</b>	<b>Location in the document</b>
<p>1. Objectives</p> <p>a. Implement a user-friendly and intuitive interface design for both the user application and the PNP application</p> <p>b. Incorporate real-time communication features, enabling users to communicate with the PNP and other community members involved in the search efforts</p>	<p>Added <i>“Implement a user-friendly and intuitive interface design for both the user application and the PNP application”</i> as this is also part of our UI/UX requirements.</p> <p>Did not add <i>“Incorporate real-time communication features, enabling users to communicate with the PNP and other community members involved in the search efforts”</i> as it is outside the scope and initial system release of the project.</p> <p>There is a “Call PNP” and “Email PNP” feature that allows users to call or email using their phone’s Call or Email feature. Moreover, in Chapter 5: Recommendations, we have already added the “Direct Messaging” to enable real-time communication features between PNP, the reportee, and the community.</p>	<p>Chapter 1: 1.3.2 Specific Objectives</p> <p>Chapter 5: 5.2.1 Application Recommendations</p>
<p>Can the save-for-later feature be implemented?</p>	<p>Implemented into the system’s initial system release build. Added to Chapter 3 as a requirement “Save Report as Draft”, and is also shown and discussed in Chapter 4 “Save Report as Draft”.</p> <p>The tables “Checklist of Requirements” in Chapter 3, as well as “Requirement Checklist Results” in Chapter 4 have been updated as well to reflect the added requirement/feature.</p>	<p>Chapter 3: 3.3.4 Functional Requirements: "Save Report as Draft"</p> <p>Chapter 4: 4.2.2 Report Pages: “Report Page Feature: Save Report as Draft"</p>

Place your tables and figures below the paragraph after which they are mentioned or discussed.	<p>Attempted to force the positioning of tables and images to be directly under the paragraph they're mentioned. It worked for some figures and tables, however some of the forced positioning is overridden by LaTeX's formatting which min-maxes the page's space utilization (so it shows up a page or two paragraphs after it is called to be positioned).</p> <p>Using a forced position ([H] from the LaTeX float package) on these ruins the formatting such that it forces the images/tables to be inside the paragraphs (in between sentences)</p>	Implemented throughout Chapter 3 and 4.
Page 6: •what is the limitation of your study?	Already in Chapter 1, 1.5 Scope and Limitations of the Research. No changes made.	Chapter 1: 1.5 Scope and Limitations of the Research
Chapter 3: • where is your ERD?	A general Enhanced Entity-Relationship Diagram (EERD) was added to Chapter 3. On top of this, the researchers also added an ERD-Database Schema Hybrid diagram which would allow for a more comprehensive visualization of the HanApp application suite's database entities, relationships, and read/write rules. Added in Chapter 3 under "Database Structure Design" subsection of the Backend Requirements.	Chapter 3: 3.3.1 Backend Requirements: "Database Structure Design"
Chapter 4: • Once logged in, as a first time user (PNP) of the system, can the user then change his/her password which was originally set by the developer?	Password reset for both PNP and main app users are currently outside the scope and initial system release build of the application. Nonetheless, this suggestion has been added to Chapter 5 as a recommendation as "Allow Users to Reset Password".	Chapter 5: 5.2.1 Application Recommendations

<p>Page 54: what will happen if the user doesn't have an ID with him/her? What kind of ID are you recommending here? Apart from the name of the user in his/her ID, what are the other details of the user that should be visible in his/her ID?</p>	<p>Incorporated a "List of Valid IDs" text and pop-up dialog into the main app user interface's report form of the initial system release build. Specifically under Report Page 2: Report Details - Proof of Identity. This is also added to (discussed and shown) in Chapter 4.</p> <p>Valid IDs include government-issued or other IDs showing the reportee's name, photo, and birth date. If the user does not have an ID in their person, they can save the report as draft and upload their ID at a later time once their ID is available.</p>	<p>Chapter 4: 4.2.2 Report Pages: Report Page 2: Reportee Details: "List of Valid IDs"</p>
<p>Recommendations: LGU/barangay interface or involvement</p>	<p>Added "Enabling LGU Involvement and Coordination" in the recommendations, detailing why it is important as well as proposed features to allow Enable LGU Involvement and Coordination.</p>	<p>Chapter 5: 5.2.2 External Dependencies and Systems Recommendations: "Enabling LGU Involvement and Coordination"</p>
